ELECTRIC DRIVEN DOUBLE REDUCTION

READY TO GET RID OF YOUR MESSY, HYDRAULIC SYSTEM?

Cone Drive has you covered with our double reduction slew drives. When using an electric motor (Servo or NEMA) to power a slewing drive, it is recommended to install a planetary gear as the primary reducer. This combination offers superior control, ease of integration into your systems, energy efficiency, and reduced maintenance. Cone Drive stocks a family of adapters and shafts for the most common primary gearboxes, ensuring a quick turnaround and a one-stop solution for your double reduction slew drive needs.

CLEAN, EFFICIENT POWER

- Clean setup
- Superior control
- Ease of integration
- Energy efficient
- Reduced maintenance
- Adapters in stock
